Office Action

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James Huffman on 3/28/08.

The application has been amended as follows:

Claim 9. A packet predictor system for predicting information about future packets to be received within a data packet processor, the future packets associated with a plurality of data flows, the data flows associated with a plurality of protocols, the predicted information being processed by a processing core prior to the future packets being received, the processing reducing latency in routing the future packets to their destinations, the system comprising:
an input for receiving information about non-predicted packets received for processing;
a packet predictor, coupled to said input, for predicting information about the future packets, based upon the information received about the non-predicted packets;
a plurality of queues, coupled to said input and said packet predictor, for storing the predicted information;

direction logic, coupled to said packet predictor, for generating a Packet ID for said future packet, wherein said Packet ID is stored in one of said plurality of queues; and

a processing core, coupled to said plurality of queues, for processing the predicted information before the future packets are received by said input;

wherein by processing the predicted information before the future packets are received, latency for delivering the future packets to an output is reduced.

Claim 17. A method for reducing latency in packet processing within a packet processor, comprising the steps of:

receiving packets associated with a plurality of data flows, the data flows from a plurality of protocols, developing and storing a history of packet information from the received packets;

predicting future information about future packets from the stored history;

validating the future information about the future packets responsive to the stored history, and if validated;

generating a Packet ID for said future packet and storing said Packet ID in one of a plurality of queues;

processing the future information about the future packets before the future packets are received;

wherein by processing the future information about the future packets before the future

packets are received, latency in delivering the future packets to their destinations is reduced; and

wherein the information comprises one or more of packet type, packet flow identification, source information, destination information, and packet size.

Allowable Subject Matter

Claims 1-20, 22 and 24 are allowed.

The following is an examiner's statement of reasons for allowance: No prior art could be found to teach all the claim limitations within the independent claims. In particular, no prior art could be found to teach the generating of a Packet ID for future packets and storing the Packet ID within a queue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
